R-squared - This compares a fund's performance to a given index. If R-squared is 100, the fund moves in lockstep with the index to which it is being compared. Generally, a higher R-squared will indicate a more useful beta figure. If the R-squared is lower, then the beta is less relevant to the fund's performance.

Beta - This compares a fund's volatility to a given index. If beta is greater than 1, the fund is more volatile than the index to which it is being compared. If beta is lower than 1, the fund is less volatile than the index. If a fund's R-squared is low, beta is less reliable as a predictor of volatility.

Alpha - This is a measure of risk-adjusted performance. The higher a fund's alpha, the better it has done. A fund's alpha is only reliable when its R-squared is relatively high.

Standard Deviation - The higher this number is, the more volatile the fund's returns have been. It indicates how much the fund has deviated from its mean total return over the past three years.

Sharpe Ratio - This measure combines standard deviation and mean total return to show a risk-adjusted measure of the fund's performance. The higher this number is, the better. As a rule of thumb, a Sharpe ratio of more than 1.00 is very good.

Total returns are historical and include change in share value and reinvestment of dividends and capital gains, if any. Cumulative total returns are reported as of the period indicated. Life of fund figures are reported as of the inception date to the period indicated. These figures do not include the effects of sales charges, if any, as these charges are waived for contributions made through your company's employee benefit plan. If sales charges were included, returns would have been lower.

With the exception of domestic equity mutual funds, investment options have been assigned to investment categories based on Fidelity's analysis. Fidelity has verified the accuracy of the placement of certain third-party non-mutual funds with either the plan sponsor or the plan sponsor's consultant. Within Domestic Equities, mutual funds are listed according to their actual Morningstar categories as of the date indicated. Morningstar categories are based on a fund's style as measured by its underlying portfolio holdings over the past 3 years and may change at any time. These style calculations do not represent the funds' objectives and do not predict the funds' future styles.

AS OF SEPTEMBER 30, 2010

SPECIFIC FUNDS

Morningstar, Inc., provided data on the non-Fidelity mutual funds. Although the data is gathered from reliable sources, accuracy and completeness cannot be guaranteed by Morningstar.

✧ For a mutual fund, the expense ratio is the total annual fund or class operating expenses (before waivers or reimbursements) paid by the fund and stated as a percent of the fund's total net assets. Where the investment option is not a mutual fund, the figure displayed in the expense ratio field is intended to reflect similar information. However, it may have been calculated using methodologies that differ from those used for mutual funds. Mutual fund data has been drawn from the most recent prospectus. For non-mutual fund investment options, the information has been provided by the trustee or plan sponsor. When no ratio is shown for these options it is due to the fact that none was available. Nevertheless, there may be fees and expenses associated with the investment option.

✪ These investment options are not mutual funds.

❍ Fidelity is temporarily reimbursing a portion of the fund's expenses. Absent such reimbursement, returns would have been lower.

MARKET INDICATORS

^^ Indices are unmanaged and you cannot invest directly in an index.

Barclays Capital U.S. Intermediate Government/Credit Bond Index is a market value-weighted index of investment-grade fixed-rate debt securities with maturities from one up to (but not including) ten years from the U.S. Treasury, U.S. Government-Related, and U.S. Corporate Indices.

Dow Jones Industrial Average, published by Dow Jones & Company, is a price-weighted index that serves as a measure of the entire U.S. market. The index comprises 30 actively traded stocks, covering such diverse industries as financial services, retail, entertainment, and consumer goods.

Morgan Stanley Capital International Europe, Australasia, and Far East (MSCI EAFE®) Index (Net MA) is a market capitalization index that is designed to measure the investable equity market performance for global investors in developed markets, excluding the US & Canada. Index returns for periods after January 1, 1997, are adjusted for tax withholding rates applicable to U.S.-based mutual funds organized as Massachusetts business trusts.

The S&P 500® Index is a registered service mark of The McGraw-Hill Companies, Inc., and has been licensed for use by Fidelity Distributors Corporation and its affiliates. It is an unmanaged index of the common stock prices of 500 widely held U.S. stocks that includes the reinvestment of dividends.

INVESTMENT RISK

➡ These target date funds are designed for investors expecting to retire around the year indicated in each target date fund. The target date funds are managed to gradually become more conservative over time. The investment risks of each target date fund changes over time as its asset allocation changes. They are subject to the volatility of the financial markets, including equity and fixed income investments in the U.S. and abroad and may be subject to risks associated with investing in high yield, small cap and foreign securities. Principal invested is not guaranteed at any time, including at or after their target dates.

➢ Although bonds generally present less short-term risk and volatility than stocks, the bond market is volatile and bond funds do entail interest rate risk (as interest rates rise, bond prices usually fall, and vice versa). This effect is usually more pronounced for longer-term securities. Bond funds also entail issuer credit risk, and the risk of default, or the risk that an issuer will be unable to make income or principal payments. Additionally, bond funds and short-term investments entail greater inflation risk, or the risk that the return of an investment will not keep up with increases in the prices of goods and services, than stocks. The fund may invest in lower-quality debt securities that generally offer higher yields, but also involve greater risk of default or price changes due to potential changes in the credit quality of the issuer.

✇ Investments in mid-sized companies may involve greater risks than those of larger, more well-known companies, but may be less volatile than investments in smaller companies.

♦ Investments in smaller companies may involve greater risks than those of larger, more well-known companies.

†† Foreign investments, especially those in emerging markets, involve greater risk and may offer greater potential returns than U.S. investments. This risk includes political and economic uncertainties of foreign countries, as well as the risk of currency fluctuation.

Before investing in any mutual fund, please carefully consider the investment objectives, risks, charges and expenses. For this and other information, call Fidelity for a prospectus or, if available, a summary prospectus. Read it carefully before you invest.
