The North Dakota Open Source Anti-Terrorism Summary is a product of the North Dakota State and Local Intelligence Center (NDSLIC). It provides open source news articles and information on terrorism, crime, and potential destructive or damaging acts of nature or unintentional acts. Articles are placed in the Anti-Terrorism Summary to provide situational awareness for local law enforcement, first responders, government officials, and private/public infrastructure owners.

Revealed: Cyberthug tool that BREAKS HSBC’s anti-Trojan tech. Group-IB spotted an exploit that bypasses part of Trusteer’s Rapport anti-trojan system on underweb forums. Trusteer stated that the vulnerability only affects one layer of security and that a patch is being distributed to users. Source: [http://www.theregister.co.uk/2013/08/06/trusteer_pushes_updates_after_cybercrook_brew_up_browser_lockdown_exploit/](http://www.theregister.co.uk/2013/08/06/trusteer_pushes_updates_after_cybercrook_brew_up_browser_lockdown_exploit/)

IPv6 is latest tool for stealing credit card numbers and passwords. Security firm Neohapsis warned that the lack of implementation of the IPv6 protocol could allow attacks to monitor networks or redirect users to malicious pages by setting up a false IPv6 version of an IPv4 connection. Modern operating systems will then select the IPv6 connection due to their inbuilt preference for the protocol. Source: [http://www.v3.co.uk/v3-uk/news/2286734/ipv6-is-latest-tool-for-stealing-credit-card-numbers-and-passwords](http://www.v3.co.uk/v3-uk/news/2286734/ipv6-is-latest-tool-for-stealing-credit-card-numbers-and-passwords)

(Virginia) Network outage cripples Chesapeake City Hall. Communication services including email, telephone services, and online services were down for several hours August 7 at the Chesapeake City Hall in Virginia due to an apparent failure in the computer network. Source: http://hamptonroads.com/2013/08/network-outage-cripples-chesapeake-city-hall

Information Technology and Telecommunications

Malicious snoopware targeting India found at tiny Midwest ISP. ThreatConnect researchers traced a malware-based cyberespionage campaign targeting India to a small internet service provider (ISP) in Kansas City, Missouri. The researchers found booby-trapped .PDF files and Flash video files used in the campaign, as well as a .ZIP file of malware on the ISP’s systems. Source: http://www.theregister.co.uk/2013/08/07/india_cyberespionage/

Expect more Android security issues in 2013. Trend Micro released their second quarter 2013 Security Roundup Report which found that the number of malicious and high-risk Android apps has grown rapidly from the previous quarter, to 718,000 from 509,000. Malware targeting online banking also grew, increasing 29 percent from the first quarter. Source: https://www.net-security.org/malware_news.php?id=2555

Windows Phones BLAB passwords to hackers, thanks to weak crypto. Microsoft warned users to take precautions after it was found that the encryption Windows Phones use to transmit domain credentials is cryptographically weak, allowing rogue hotspots to intercept and decrypt
the information. Microsoft advised IT departments to distribute a special root certificate that allows the phones to confirm that they are connecting to a genuine access point before transmission. Source: http://www.theregister.co.uk/2013/08/06/microsoft_win_phone_wifi_vuln/

**Phishing attacks show sudden drop as criminals use servers for DDoS.** The Anti-Phishing Working Group released their first quarter 2013 report, which found that detected phishing Web sites fell 20 percent in the quarter as cybercriminals switched servers to malware distribution or distributed denial of service (DDoS) attacks. Source: http://news.techworld.com/security/3462159/phishing-attacks-show-sudden-drop-as-criminals-use-servers-for-ddos/

**Android one-click Google authentication method puts users, businesses at risk.** A Tripwire researcher at the DEF CON 21 conference detailed a way in which the weblogin feature on Google sites can be used to give attackers access to Google accounts. The researcher published a proof-of-concept app that can steal weblogin tokens and send them to the attacker for use. Source: https://www.computerworld.com/s/article/9241355/Android_one_click_Google_authenticatio_n_method_puts_users_businesses_at_risk

**Experts say 10 companies are responsible for 60% of Russian mobile malware.** Security firm Lookout released a study of Russian mobile malware and found that 10 organizations were responsible for creating 60% of mobile malware originating in Russia, among other findings. Source: http://news.softpedia.com/news/Experts-Say-10-Companies-Are-Responsible-for-60-of-Russian-Mobile-Malware-373107.shtml

**Feds are suspects in new malware that attacks Tor anonymity.** A piece of malware that exploits a vulnerability in Firefox 17 and redirects connections over The Onion Router (TOR) network so users’ true IP addresses can be discerned was found on several Web sites hosted by Freedom Hosting. Source: http://www.wired.com/threatlevel/2013/08/freedom-hosting/

**BREACH compression attack steals HTTPS secrets in under 30 seconds.** Browser Reconnaissance and Exfiltration via Adaptive Compression of Hypertext (BREACH) an attack that enables the reading of encrypted messages via plaintext injection into an HTTPS request, prompted an advisory after it was demonstrated at the Black Hat 2013 conference. Source: https://threatpost.com/breach-compression-attack-steals-https-secrets-in-under-30-seconds/101579
