**How the Sliding Fee Scale Works and How the Family Maximum Payment Works**

The co-pays, which are determined by the sliding fee scale, are a percentage of the allowable child care billing by the provider. Based on family size and gross income, the state pays a percentage of the allowable charges with the remainder being the responsibility of the family. The co-pay increases with the increased income of the family. There is also a family cap payment. After the family's co-pay is determined based on the sliding fee scale, it is compared to the family cap. The family pays the lower of the two amounts. The Sliding Fee Scale includes the cap amount for each family size along with the percentage on the sliding fee scale.

A family of three with the gross income of \$1,400 based on the sliding fee scale would have at least 55% of the allowable costs paid by CCAP. If there were two children, each with an allowable cost of \$360, based on the sliding fee scale the family would pay \$324, which would be 23% of the family income. Because of the maximum family payment policy, the family would pay \$212, which is 15% of their income. Without assistance this family would be paying 23% of their income for child care.
