

Grant Round Application for LRC LXXI (71)

**TECHNICAL ADVISOR RECOMMENDATION
LRC-LXXI (71) – B**

“Water Recovery from Lignite Drying”

Submitted by: Energy and Environmental Research Center

Request for: \$266,520; Total Project Costs; \$897,335

Description of the Project This project has two overall goals. They are: 1) to demonstrate that water produced during the drying of ND lignite can be economically recovered, and 2) to develop baseline data that will provide new marketing strategies for ND lignite.

Technical Advisor’s Recommendation: Fund

Fund subject to the following:

- a. Program Management Plan including milestone chart, schedule, financial plan including detailing of labor hours, organization and communication charts, submitted and approved by the Technical Advisor.
- b. Matching Funding received from all the parties.
- c. Demonstrate that the project is addressing “Process specific” issues related to the coal drying operation as the technology has already been demonstrated in other applications.

Conflict of Interest: Energy and Environmental Research Center.
Great River Energy
