R-squared - This compares a fund's performance to a given index. If R-squared is 100, the fund moves in lockstep with the index to which it is being compared. Generally, a higher R-squared will indicate a more useful beta figure. If the R-squared is lower, then the beta is less relevant to the fund's performance.

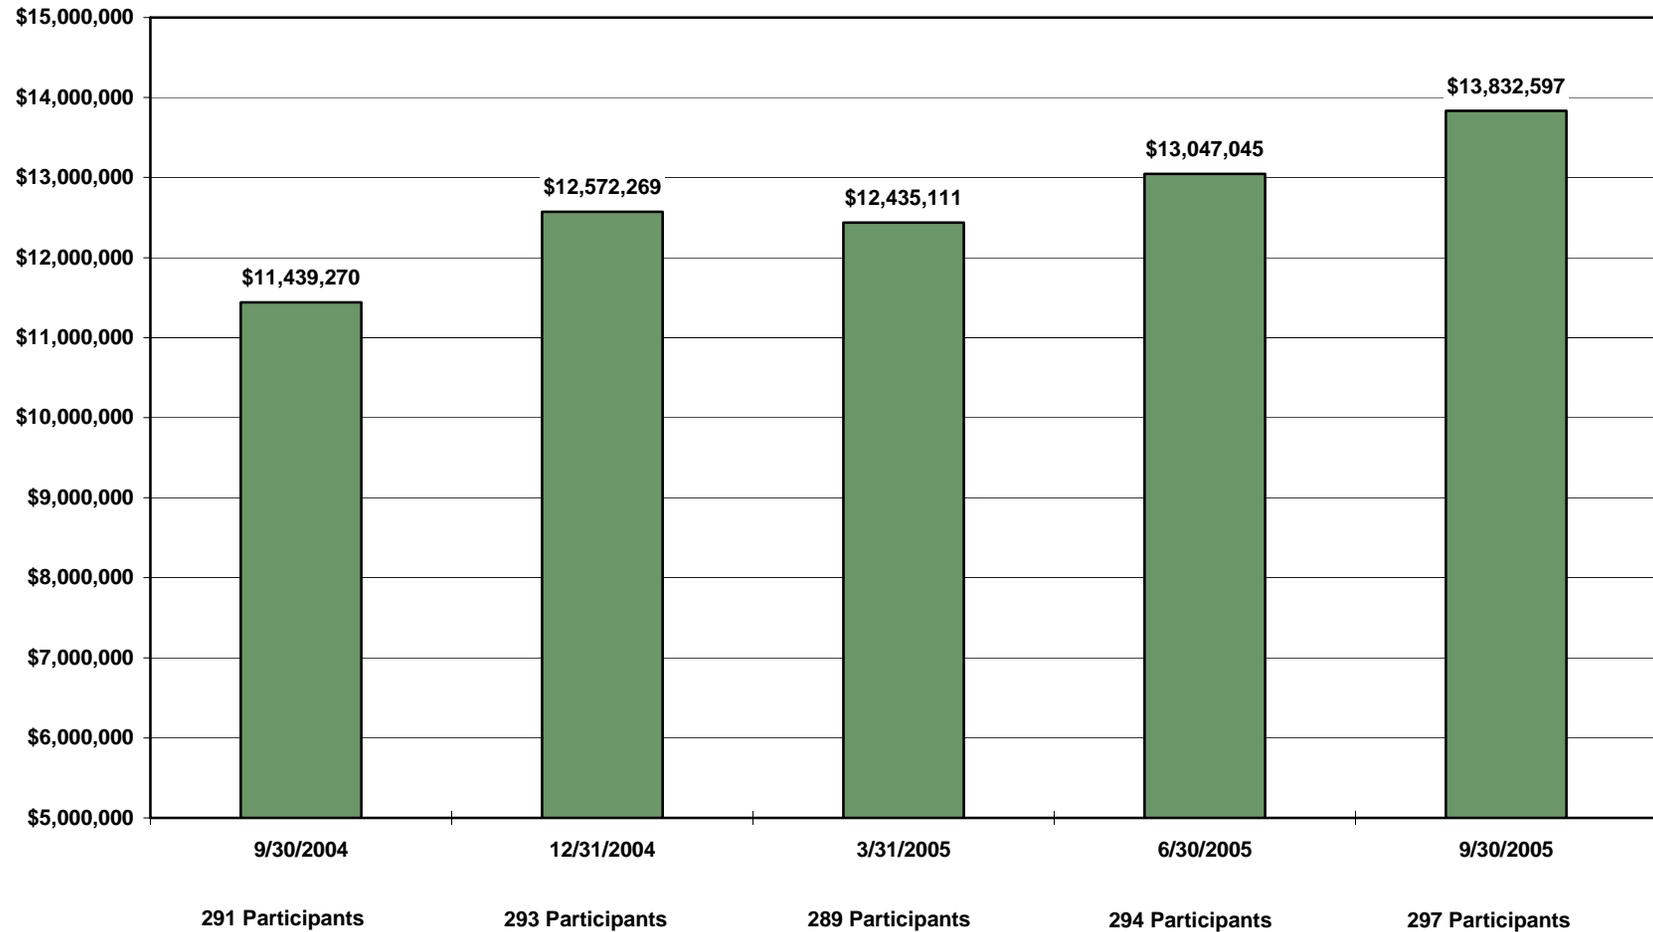

Beta - This compares a fund's volatility to a given index. If beta is greater than 1, the fund is more volatile than the index to which it is being compared. If beta is lower than 1, the fund is less volatile than the index. If a fund's R-squared is low, beta is less reliable as a predictor of volatility.

Alpha - This is a measure of risk-adjusted performance. The higher a fund's alpha, the better it has done. A fund's alpha is only reliable when its R-squared is relatively high.

Standard Deviation - The higher this number is, the more volatile the fund's returns have been. It indicates how much the fund has deviated from its mean total return over the past three years.

Sharpe Ratio - This measure combines standard deviation and mean total return to show a risk-adjusted measure of the fund's performance. The higher this number is, the better. As a rule of thumb, a Sharpe ratio of more than 1.00 is very good.

 Fidelity Freedom 2025 Fidelity Freedom 2035

This spectrum, with the exception of the Domestic Equity category, is based on Fidelity's analysis of the characteristics of the general investment categories and not on the actual investment options and their holdings, which can change frequently. Investment options in the Domestic Equity category are based the options' Morningstar categories (Large Value, Mid-Cap Value, Small Value, Large Blend, Mid-Cap Blend, Small Blend, Large Growth, Mid-Cap Growth, Small Growth) as of 12/31/01. Morningstar categories are based on a fund's style as measured by its underlying portfolio holdings over the past three years and may change at any time. These style calculations do not represent the investment options' objectives and do not predict the investment options' future styles. For more information on the investment options in the Domestic Equity category, visit www.Morningstar.com. Investment options are listed in alphabetical order within each investment category. Risk associated with the investment options can vary significantly within each particular investment category, and the relative risk of categories may change under certain economic conditions.

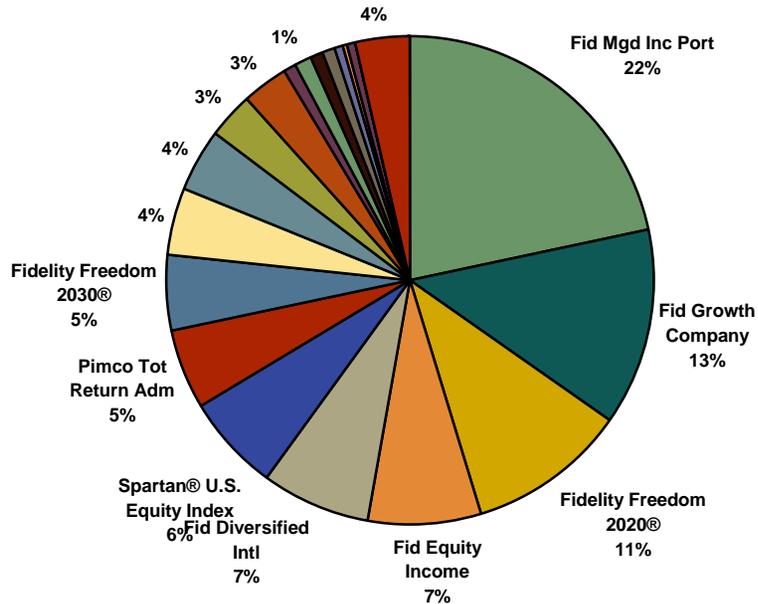

If your plan offers Asset Manager funds please note, the portfolio manager of each of the Asset Manager funds has the flexibility to periodically shift investments between the three asset classes, depending on the current outlook for the various markets. The risk level of the Asset Manager fund(s) cannot be portrayed as a single point on the objective spectrum along with the other investment options because it can change periodically according to how the assets are invested.

If your plan offers Fidelity Freedom Funds® please note, the Fidelity Freedom Funds are not represented on the above spectrum because each fund (except Fidelity Freedom Income) will gradually adjust the asset allocation to be more conservative as the funds approach their target dates. The risk level of the Fidelity Freedom Funds cannot be portrayed as a single point on the objective spectrum along with the other investment options because they can change periodically according to how the assets are invested.

For a more complete discussion of risk associated with the mutual fund options, please read the prospectus before making your investment decision. The spectrum does not represent actual or implied performance.

recent average annual return data is published online each month end. Please visit PSWSM or call Fidelity for these most recent performance figures. Periods of market strength may not be repeated.

The performance data quoted represents past performance, which is no guarantee of future results. Share price, yield and return will vary and you may have a gain or loss when you sell your shares.

An investment in a money market fund is not insured or guaranteed by the FDIC or any other government agency. Although money market funds seek to preserve the value of your investment at \$1 per share, it is possible to lose money by investing in these funds.

The current yield reflects the current earnings of the fund, while the total return refers to a specific past holding period.

Please see Footnote pages for important legal information.

*Return reflects life of fund from inception date shown.
