North Dakota Change Management Recommendations
September 16, 2013

Developed by: Keith Arnold, Katie Harrigan, Doug Kittredge, Peter Summerville, Nancy Wise.

Agenda

• Project Understanding and Approach
• Industry Best Practices
• Change Management Recommendations for North Dakota
• Appendix
Aspects of the ACA going into effect in 2014 collectively represent the largest change to public health programs in many years.

**Significance**
- New population purchasing coverage
- Many consumers who may have little to no experience in purchasing or consuming health coverage
- New model for purchasing
- North Dakota is expected to experience one of the largest percentages changes in eligibility in the country

**Coming changes**
- Medicaid Expansion
- Health Insurance Marketplaces
- Individual Mandate
- Guaranteed Issue

---
1"The Kaiser Family Foundation, statehealthfacts.org. Data source: Medicaid Coverage and Spending in Health Reform: National and State-By-State Results for Adults at or Below 133% FPL, the Urban Institute, May 2010. Available at: http://www.kff.org/healthreform/8076.cfm.

---

**Change Management Recommendations**

*HTMS was engaged by the North Dakota Department of Health Services to provide change management consulting in support of changes related to the ACA*

**Assessment:**
- Identify how each stakeholder group will be affected
- Identify core change management issues
- Overview of system access scope issues and opportunities

**Training Plan**
- Assessment of existing training resources and capacity
- Assessment of additional resources needed
- Training materials

**Education and Outreach Plan**
- Messaging and goals
- Communication activities and venues (including web-based)
- Outreach/educational materials
- Performance metrics

**Plans were customized for each stakeholder group**

**Combined deliverable – August 2013**

**Change Management Recommendations**
- Best practices
- Survey feedback instrument
- Presentation materials and templates
- Talking points & announcement templates custom to stakeholder groups

**September 2013**
The following methodology was applied to derive Change Management Recommendations

To understand best practices in change management for the implementation of enterprise wide system and process changes, we relied on a combination of primary and secondary research.

**Assessment:** Identified current practices and outstanding change management needs through initial Assessment

**Secondary Research:** Completed literary review to understand models of change and identify best practices

**Primary Research:** Met with internal and external industry experts for lessons learned, change management implementation approaches and tools, and other insights

**Analysis and Findings:** Summarized findings and extracted key take-a-ways relevant to the scope of this project

---

**Agenda**

- Project Understanding and Approach
- **Industry Best Practices**
- Change Management Recommendations for North Dakota
- Appendix
Proactive change management is important to any significant change in the rules, structure, or culture of an organization

A change management process can enable success by ensuring the project stays within scope, budgets, and timelines.

It also mitigates the following risks to the project, organization, or stakeholders involved:

- Projects exceeding budget, impact, or time;
- Organizational divisions between those pushing for and against change; and
- Missteps or challenges that could impact reputation or other issues.

"Having a documented change management process that the organization is educated on and understands how to use is critical."

"Push the change management process to make sure you’re not absorbing change that hasn’t followed the process."

"There is a great deal of time and energy wasted when people circumvent a change management process."

Barriers to organizational change can impede successful transformations

Examples of these barriers include:

- Resistance to change from key figures or the culture overall
- Misunderstanding of goals and objectives of change resulting from poor communication channels
- Disagreement with the underlying need for change or new path identified
- Incentives misaligned with the old goals rather than the new vision
- Insufficient bandwidth to actively manage and absorb change
- Failure to adopt and use change management practices

"Taking the train off the track while its moving is very disruptive. Most people, as a general rule, will try to keep the train on the tracks in the original direction."

"Getting people to actually use the process vs. unilaterally making changes without communicating them, and then needing to absorb additional work, time, and costs that weren’t planned for is a huge barrier."
HTMS relied on the **Kotter change management model**, an 8 step process of implementing change while overcoming barriers.

There are numerous change management models, each with a particular emphasis or approach.

HTMS has a history of applying this model successfully in their implementation practice.

“It doesn’t matter which change management model you choose. What’s most important is that you choose a good one and use it to drive change.”

This section relies on the Kotter model supplemented with findings from third party research, team experience, and expert interviews.

Kotter offers an 8 step model of change that can serve as a guiding framework for implementing organizational transformation.

<table>
<thead>
<tr>
<th>Kotter’s 8-Step Model of Change</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Establish</strong></td>
</tr>

</tr>
<tr>
<td>5. Empowering Broad-Based Action</td>
</tr>
<tr>
<td>6. Generating Short-Term Wins</td>
</tr>
<tr>
<td><strong>Stabilize</strong></td>
</tr>
<tr>
<td>7. Consolidating Gains &amp; Producing More Change</td>
</tr>
<tr>
<td>8. Anchoring New Approaches in the Culture</td>
</tr>
</tbody>
</table>

Derived from Kotter Model to be found at: [http://www.kotterinternational.com/our-principles/changesteps](http://www.kotterinternational.com/our-principles/changesteps)
The most successful changes occur when there is **buy-in** and support at all levels of an organization

### ESTABLISH

#### Step 1: Establish sense of urgency

**Purpose**: Motivating people to embrace the change

**Industry Best Practices**
- Communicate clearly and frequently about coming changes and why they are necessary
- Communicate about specific impacts to each stakeholder involved
- Request support from employees and stakeholders
- Identify potential threats and mitigation strategies early on

*"This is happening with them, not to them"*

*"Communicating how, when, and why, and often."*

---

Support for an initiative should be driven from **multiple** levels in an organization

### ESTABLISH

#### Step 2: Create a guiding coalition

**Purpose**: Establishing why change is necessary

**Industry Best Practices**
- Identify appropriate champions in the organization
- Champions should represent a variety of departments and levels
- Work with these champions to collaborate on how to drive support throughout the organization

*"Get various stakeholders on board and behind the desire to change so that they are pushing with you instead of against you."*

*"If you go about it correctly and change is the right thing to do, by and large, you will gain support"*
A clear vision that articulates what the transformation will look like helps everyone understand the necessity of the change.

**VISION**

<table>
<thead>
<tr>
<th>Step 3</th>
<th>Develop vision and strategy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
<td>Establishing a vision for the organization that will enable stakeholders to embrace and support the coming changes</td>
</tr>
<tr>
<td><strong>Industry Best Practices</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Determine how the change fits in with project goals and organizational vision</td>
</tr>
<tr>
<td></td>
<td>Ensure all levels of an organization were able to provide input</td>
</tr>
<tr>
<td></td>
<td>Clearly communicate the vision frequently and in many venues</td>
</tr>
<tr>
<td></td>
<td>Collaboratively develop a strategy to execute the vision</td>
</tr>
</tbody>
</table>

"Tweaking the approach to facilitate an understanding and an empathy on both sides that you’re in this together."

"Having people feel like they are part of the change and that they have a say in how it proceeds is critical."

The vision garners support only when it is effectively communicated.

**VISION**

<table>
<thead>
<tr>
<th>Step 4</th>
<th>Communicate the change vision</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
<td>Communication of the vision will determine how well changes are embraced</td>
</tr>
<tr>
<td><strong>Industry Best Practices</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Communicate often and in different ways; repetition will help stakeholders to absorb the how and why of the coming changes</td>
</tr>
<tr>
<td></td>
<td>Create a mechanism for gathering input from all levels within the organization</td>
</tr>
<tr>
<td></td>
<td>Apply visions to all operational activities and departments</td>
</tr>
</tbody>
</table>

"What you say and what you intended to be heard is not always the same as what was heard."

"Be careful about messaging to make it succinct, to the point, and clear."
Despite best efforts, some form of resistance is likely to occur

<table>
<thead>
<tr>
<th>ACT</th>
<th>Step 5</th>
<th>Empower broad based action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purpose</td>
<td>Identifying resistance and methods for overcoming</td>
<td></td>
</tr>
</tbody>
</table>
| Industry Best Practices | - Align incentives for the future state  
- Identify change leaders whose roles are dedicated to motivating change  
- Reward stakeholders for contributions  
- Identify resistant stakeholders and take steps to demonstrate the value |

"There is a general sense of inertia that happens in organizations where you've been doing things for long enough that momentum builds around doing that same thing."

"Some people will be resistant no matter what. Reevaluate their roles."

Engaging stakeholders participation in early successes will help sustain high levels of motivation

<table>
<thead>
<tr>
<th>ACT</th>
<th>Step 6</th>
<th>Generate short term wins</th>
</tr>
</thead>
<tbody>
<tr>
<td>Purpose</td>
<td>Show milestone results so that stakeholders can see progress as it occurs</td>
<td></td>
</tr>
</tbody>
</table>
| Industry Best Practices | - Define achievable milestones that contribute to the vision and strategy  
- Recognize those contributing to meeting defined targets  
- Providing opportunities to demonstrate outcomes |

"The way you make people feel important is by involving them. If you don’t they feel like a cog in the wheel."

"Providing feedback on successes is important."

"If you get feedback and don’t listen, that is worse than not getting feedback."
Values guiding the change should be demonstrated in all aspects of the organization

<table>
<thead>
<tr>
<th>STABILIZE</th>
<th>Anchor new approaches in the culture and Consolidate Gains</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Steps 7 and 8</strong></td>
<td><strong>Purpose</strong>&lt;br&gt;Embedding the changes and the value they deliver in day to day operations allows an organization to achieve a long-term cycle of identifying and implementing improvements</td>
</tr>
</tbody>
</table>
| **Industry Best Practices** | - Emphasize success stories  
- Incorporate the change values in hiring requirements and process  
- Sustain momentum for change in light of potential resource shifts  
- After every win, analyze what went right and what needs improving.  
- Set goals to continue building on the momentum you’ve achieved.  
- Keep ideas fresh by nurturing organizational champions |

"Training is important for people to understand the context of their new role and how upstream and downstream processes will change."

"You don’t want to do systems training, you want to do jobs training."

"Plan, do, check. It’s a never ending cycle."

**Agenda**

- Project Understanding and Approach
- Industry Best Practices
- Change Management Recommendations for North Dakota
- Appendix
ND DHS has demonstrated commitment to implementing large scale changes using proactive change management

**Establish**
- DHS is using changes driven by the ACA as an opportunity to realign systems and automate once manual and time consuming processes
- Conducted an unbiased assessment of stakeholder needs and reduce capacity needs on current resources

**Vision**
- Established a plan for implementing ACA and Medicaid Expansion in North Dakota
- Identified the need to communicate changes to external constituents

**Act**
- Developed a website to distribute content related to Medicaid Expansion
- Created plans to execute on education and outreach
- Provided training to key constituents throughout the community

**Stabilize**
- Sought change management best practices for ongoing maintenance

Still, organizational changes being implemented could benefit from the following recommendations

**Recommendations**

1. Engage select stakeholders and opinion leaders in the process
2. Establish ongoing communications with all impacted parties
3. Develop communications in terms of audiences’ environment and workflow
4. Use mandated change as an opportunity to resolve existing issues
5. Expect gaps and unknown scenarios to emerge

Each of these has specific best practices associated with them.
### #1. Engage select stakeholders and opinion leaders in the process

**Principle**
Engaging stakeholders and leaders in the process improves intelligence, minimizes assumptions, and engages constituents in the process.

**Recommendations**
- Develop a Steering Committee with representatives of internal and external critical stakeholders to maintain ongoing lines of communication regarding the overall change management.
- Test processes and outcomes early (even on paper) with those working with applicants could help expose areas of confusion, optimize results, and minimize rework.
- Engage a singular executive sponsor to manage the day to day activities of the project.

**Potential Risks**
- With all teams stretched to capacity, it can be difficult to secure time and input from a broad range of constituents.
- It is important to be clear where contributors have the ability to influence outcomes or decisions vs. providing perspectives.

### #2. Establish ongoing communications

**Principle**
Communications with relevant stakeholders should be two-way and continue on after implementation to ensure feedback on the current state is understood and continually improved upon.

**Recommendations**
- Provide regular talking points to county eligibility workers around changes to policy, processes, or tools so that they can address consumer concerns in a way that aligns with DHS’ objectives.
- Establish more frequent but less formal opportunities for interaction, such as through webinars so that county eligibility offices can interact with subject matter.
- Develop a mechanism for establishing a feedback loop to identify what is working well and where additional efforts may be needed.

**Potential Risks**
- Ongoing communications could have an impact on resource capacity and would need to be planned for and worked into roles and responsibilities.
- Without clear and concise communications the value may be diluted.
### #3. Develop communications in terms of audiences’ environment and workflow

<table>
<thead>
<tr>
<th>Principle</th>
<th>Where relevant, develop custom communications by audience to ensure understanding and to avoid misinformation and confusion.</th>
</tr>
</thead>
</table>
| **Recommendations** | • Provide appropriate documentation as needed for each audience base, including:  
  - Education  
  - Instruction on where to refer for further information  
  - Guidance on how to direct constituents toward education and referral  
• When a policy changes, include descriptions of how roles and responsibilities are impacted.  
• Prepare training materials and resources based on scenarios that include logic tests and other real-life variables. |
| **Potential Risks** | • Customizing too specifically for different audiences could offer limited incremental value relative to the effort. |

### #4. Use mandated changes as opportunity to resolve existing issues (within reason)

<table>
<thead>
<tr>
<th>Principle</th>
<th>Mandated changes provide an opportunity for organizations to leverage resources towards resolving existing issues or enhancing current functionalities that may coincide with the scope of changes.</th>
</tr>
</thead>
</table>
| **Recommendations** | Use the ACA changes as an opportunity to fix related issues that need to be addressed:  
  • Perform a reality-based assessment to manage scope.  
  • Maintain a queue of requested enhancements. Any time code in a module is being changed, it is an efficient time to include other enhancements |
| **Potential Risks** | • It is also important not to load a mandated project with too much other change so as to limit movement or jeopardize success. |
#5. Expect gaps and unknown scenarios to emerge

<table>
<thead>
<tr>
<th>Principle</th>
<th>During the implementation of any major change, it is not uncommon to discover unplanned circumstances. The team may become aware of gaps in the requirements, dependencies, opportunities for greater efficiency, or resource changes. These situations should be viewed as opportunities to improve upon existing functions and processes, within limits.</th>
</tr>
</thead>
</table>
| Recommendations | • For an initial period of time after major new functionality is released utilize a "war room" approach.  
• Have one or more planned “fix” releases on short cycles to cover corrections for unexpected conditions.  
• Provide eligibility workers and other constituents with "workarounds" until fixes can be put into production. |
| Potential Risks | • Scope creep needs to be aggressively managed in order to prevent burden on budget and deadlines. |
