RESPIRATORY ASSIST DEVICE (BIPAP)

DEFINITIONS RELATED TO OSA:
Apnea is defined as the cessation of airflow for at least 10 seconds.
Hypopnea is defined as an abnormal respiratory event lasting at least 10 seconds associated with at least a 30% reduction in thoracoabdominal movement or airflow as compared to baseline, and with at least a 4% decrease in oxygen saturation.
Polysomnographic studies must be performed in a sleep study laboratory NOT in a home or mobile unit.
The apnea-hypopnea index (AHI) is defined as the average number of episodes of apnea and hypopnea per hour of sleep without the use of a positive airway pressure device. For purposes of this policy, respiratory effort related arousals (RERAs) are not included in the calculation of the AHI. Sleep time can only be measured in a Type I (facility based Polysomnogram).
If the AHI is calculated based on less than 2 hours of sleep or recording time, the total number of recorded events used to calculate the AHI must be at least the number of events that would have been required in a 2 hour period (i.e., must reach ≥30 events without symptoms or ≥10 events with symptoms).

Indications and limitations of coverage and medical appropriateness:
Coverage allowed if one of the following conditions are present:
I. Symptoms characteristic of sleep-associated hypoventilation, such as daytime hyper somnolence, excessive fatigue, morning headache, cognitive dysfunction, dyspnea, etc. or
II. Restrictive thoracic disorders (i.e. progressive neuromuscular diseases or sever thoracic cage abnormalities), severe chronic obstructive pulmonary disease, central sleep apnea or obstructive sleep apnea and the member’s oxygen saturation drops below 88% on room air, or
III. An E0470 device is covered for the treatment of obstructive sleep apnea (OSA) if criteria A – D are met:

A. Clinical evaluation by the treating practitioner prior to the sleep test to assess the member for obstructive sleep apnea; and

B. The member has a sleep test (as defined below) that meets either of the following criteria (1 or 2); and

1. The apnea-hypopnea index (AHI) is greater than or equal to 15 events per hour with a minimum of 30 events; or

2. The AHI is greater than or equal to 5 and less than 15 events per hour with a minimum of 10 events and documentation of:
   a. Excessive daytime sleepiness as documented by a score of greater than 10 on the Epworth Sleepiness Scale, impaired cognition, mood disorders or insomnia; or
   b. Hypertension, ischemic heart disease, or history of stroke.

C. The member or their caregiver has received instruction from the durable medical equipment and supplies (DMEPOS) provider of the BIPAP device and accessories in the proper use and care of the equipment;

D. An E0601 has been tried and proven ineffective based on a therapeutic trial conducted in a facility or during home trial. Ineffective is defined as one of the following:

   • Documented failure to meet therapeutic goals using an E0601 during the titration portion of a facility-based study despite optimal therapy (i.e., proper mask selection and fitting and appropriate pressure settings) or,

   • If a CPAP (E0601) device is tried and found ineffective during the initial three month home trial; substitution of a BIPAP (E0470) does not require a new sleep study. A new service authorization requesting a three month trial for use of the E0470 is needed or,
RESPIRATORY ASSIST DEVICE (BIPAP)

If a CPAP (E0601) device has been used for more than three months and the member is switched to a BIPAP (E0470), a clinical re-evaluation is required along with a new service authorization requesting a three month trial for use of the E0470, but does not require a new sleep study.

INITIAL RENTAL COVERAGE OF THE FIRST THREE MONTHS OF THERAPY:
- Arterial blood gases, sleep studies, and sleep oximetry; MUST NOT be performed by the DME supplier
- A heated (E0562) or non-heated (E0561) humidifier will be considered.
- Included during rental: Compressor, manometer, CPAP Valve (if separate from mask), fuses, nasal cannula’s repairs to equipment.
- Accessories used with the CPAP/ RAD device are covered when the coverage criteria for the device are met.

CONTINUED RENTAL COVERAGE BEYOND THE FIRST THREE MONTHS OF THERAPY:
- Initial approval will be for three months rental only and then if documentation supports compliance and the therapy is effective, request for the remaining 9 months rental will be considered.
- Accessories used with the CPAP device are covered when the coverage criteria for the device are met.
- Adherence to therapy is defined as use of PAP ≥4 hours per night on 70% of nights during a consecutive thirty (30) day period anytime during the first three (3) months of initial usage.
### RESPIRATORY ASSIST DEVICE (BIPAP)

Supplies

A mask (A7030) and headgear (A7035) will be paid separately during the rental period.

The following table represents the usual maximum amount of accessories expected to be medically necessary for use with patient owned equipment:

</table>

A non-heated (E0561) or heated (E0562) humidifier is covered and paid separately for use with a covered E0470.

Documentation Requirements:

- Physician prescription.
- Current physician exam within 60 days of service authorization start date.
- Polysomnogram (Initial Request: must be within last 12 months) (Replacement Request: sleep study from original request is required).
- Download to verify compliance for continued coverage.
- CMN
### RESPIRATORY ASSIST DEVICE (BIPAP)

**Documentation from the manufacturer to support the device if irreparable/obsolete.**

**Non-covered:**
- A bi-level positive airway pressure device with back-up rate (E0471) is **not** reasonable and necessary if the primary diagnosis is OSA.
