MATHEMATICS GRADE 8

| ALD | Standard | Novice | Partially Proficient | Proficient | Advanced |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Policy |  | The Level 1 student is below proficient in applying mathematics knowledge/skills as specified in the standards. <br> The student generally performs significantly below the standard for the grade level/course, is likely able to partially access grade-level content, and engages with higherorder thinking skills with extensive support. | The Level 2 student classifies any real number as rational or irrational. The student converts decimals into rational numbers when possible. | The Level 3 student is proficient in applying mathematics knowledge/skills as specified in the standards. <br> The student generally performs at the standard for the grade level/course, is able to access grade-level content, and engages in higher-order thinking skills with some independence and minimal support. | The Level 4 student is highly proficient in applying mathematics knowledge/skills as specified in the standards. <br> The student generally performs significantly above the standard for the grade level/course, is able to access above grade-level content, and engages in higher-order thinking skills independently. |
| Number System |  |  |  |  |  |
|  |  | The Level 1 Student: | The Level 2 Student: | The Level 3 Student: | The Level 4 Student: |
| Range | 8.NS. 1 | Identifies square roots of non-square numbers and pi as irrational numbers. Understands that every number has a decimal expansion. Converts familiar rational numbers with one repeating digit to fraction form. | Identifies rational and irrational numbers and converts familiar rational numbers with two or more repeating digits to fraction form. | Classifies any real number as rational or irrational. Converts decimals into rational numbers when possible. | Give examples of rational and irrational numbers with explanation of their classification. Convert decimals into rational numbers when possible. |
| Range |  |  |  |  |  |
| Expressions and Equations |  |  |  |  |  |
|  |  | The Level 1 Student: | The Level 2 Student: | The Level 3 Student: | The Level 4 Student: |
| Range | 8.EE. 1 | Generates an equivalent numerical expression of natural number exponents in a single step. | Applies the properties of natural number exponents to generate equivalent numerical expressions. | Knows and applies the properties of integer exponents to generate equivalent numerical and algebraic expressions. | Knows and applies the properties of integer exponents to generate multiple equivalent numerical and algebraic expressions. |
| Range | 8.EE. 2 | Evaluates square roots of small perfect squares. | Solves mathematical equations (without context) of the form $x^{\wedge} 2=p$ and $x^{\wedge} 3=p$, where $p$ is a positive rational number and the solutions are rational. | Uses square root and cube root symbols to represent solutions to equations of the form $x^{\wedge} 2=p$ and $x^{\wedge} 3=p$, where $p$ is a positive rational number. | Explains how square roots and cube roots relate to each other and to their radicands. |
| Range | 8.EE. 3 | Correctly writes numbers in scientific notation. | Uses numbers expressed in the form of a single digit times an integer power of 10 to estimate very large and very small quantities. | Expresses how many times a number written as an integer power of 10 is compared to another number written as an integer power of 10 . | Converts between decimal notation and scientific notation and compares numbers written in different notations. |

## MATHEMATICS GRADE 8

| ALD | Standard | Novice | Partially Proficient | Proficient | Advanced |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Range | 8.EE. 4 | Represents very large and very small quantities in scientific notation and uses appropriate units. | Multiplies and divides numbers in scientific notation. | Performs operations with numbers expressed in scientific notation, including problems with numbers written in both decimal and scientific notation, and interprets scientific notation that has been generated by technology. | Calculates and interprets values written in scientific notation within a context. |
| Range | 8.EE. 5 | Graphs proportional relationships, interpreting the unit rate as the slope. | Graphs proportional relationships, interpreting the unit rate as the slope and compares two different proportional relationships using the same representation. | Graphs proportional relationships, interpreting the unit rate as the slope of the graph and compares two different proportional relationships represented in different ways. | Compares and contrasts situations which would and would not yield the same slope. |
| Range | 8.EE. 6 | Determines the slope of a line given a graph. | Derives the equation $\mathrm{y}=\mathrm{mx}$ for a line through the origin. | Recognizes and explains why the slope $m$ is the same between any two distinct points on a non-vertical line in the coordinate plane and derives the equation $y=m x+b$ for a line intercepting the vertical axis at $b$. | Compares and contrasts situations in which similar triangles would and would not yield the same slope. |
| Range | $\begin{aligned} & \hline \text { 8.EE.7a } \\ & \text { 8.EE.7b } \end{aligned}$ | Solves simple linear equations with integer coefficients. | Solves multi-step linear equations with rational coefficients and identifies equations that have one solution, infinitely many solutions, or no solutions. | Solves multi-step linear equations with rational coefficients and variables on both sides and provides examples of equations that have one solution, infinitely many solutions, or no solutions. | Justifies through multiple representations why an equation has one solution, infinitely many solutions, or no solutions. |
| Range |  |  |  |  |  |
| Functions |  |  |  |  |  |
|  |  | The Level 1 Student: | The Level 2 Student: | The Level 3 Student: | The Level 4 Student: |
| Range | 8.F. 1 | Identifies whether a relation is a function from a graph or a mapping. | Identifies whether a function is a relation from any representation. | Explains that a function is a rule that assigns to each input exactly one output and that the graph of a function is the set of ordered pairs consisting of an input and the corresponding output. | Creates any representation of a relation and explains why it is a function or is not a function. |
| Range | 8.F. 2 | Given a function expressed as an equation, creates a graph. | Given a representation of a function, creates another representation of that function. | Compares properties (i.e., slope, $y$ intercept, values) of two functions each represented in a different way (algebraically, graphically, numerically in tables, or verbal descriptions). | Justifies whether two functions represented in different ways are equivalent or not by comparing their properties. |

## MATHEMATICS GRADE 8

| ALD | Standard | Novice | Partially Proficient | Proficient | Advanced |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Range | 8.F. 3 | Determines whether a function is linear or nonlinear from a graph. | Determines whether a function is linear or nonlinear from an equation in the form $y=m x+b$. | Determines whether or not a function is linear or nonlinear (from a graph, table, and equation). Gives examples of functions that are not linear. | Explains why the function is linear or nonlinear. |
| Range | 8.F. 4 | Determines the rate of change of the function from a graphical description of the linear function. | Determines the rate of change and initial value of the function from two $(x, y)$ values. Creates a graph of identified information. | Interprets the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values. Constructs a function to model a linear relationship between two quantities. | Identifies what prevents a set of values in either a table or graph from being linear and adjusts the values to make them linear. |
| Range |  |  |  |  |  |
| Geometry |  |  |  |  |  |
|  |  | The Level 1 Student: | The Level 2 Student: | The Level 3 Student: | The Level 4 Student: |
| Range | 8.G. 1 | Identifies the corresponding lines, line segments, or angles in a single rigid transformation. | Identifies the corresponding lines, line segments, and angles in rigid transformations. | Describes the properties of rotations, reflections, and translations. | Recognizes and explains the properties of rotations, reflections, and translations in real-world graphic illustrations and visual representations. |
| Range | 8.G. 2 | Identifies two congruent figures using rotations, reflections, or transformations. | Identifies a transformation between two congruent figures. | Describes a sequence of rigid transformations between two congruent figures. | Recognizes and explains congruent figures in real-world graphic illustrations and visual representations |
| Range | 8.G. 3 | Identifies a visual representation of a dilation, translation, rotation, or reflection. | Describes the effect of reflections and translations on two-dimensional figures using coordinates and coordinate notation. | Describes the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates and coordinate notation. | Describes the effect of multiple transformations including dilation on two-dimensional figures using coordinates and coordinate notation. |
| Range | 8.G. 4 | Recognizes that it takes a combination of transformations and dilation to produce a similar figure. | Identifies dilations of figures by a given scale factor and transformations. | Describes a sequence of rigid transformations and dilation that results in similar figures. | Recognizes that a dilation with a scale factor of 1 leads to congruence. |
| Range | 8.G. 5 | Knows that the sum of angles of a triangle equals 180, and identifies angle pairs when parallel lines are cut by a transversal. | Finds unknown angle measures in a triangle, and unknown angle measures for angle pairs when parallel lines are cut by a transversal. | Gives an informal argument for: sum of angles of a triangle equals 180 <br> the measure of an exterior angle of a triangle is equal to the sum of the measures of the non-adjacent angles congruent angle relationships when parallel lines are cut by a transversal the angle-angle criterion for similarity of triangles | Gives an informal argument that a triangle can only have one 90-degree angle. Gives an informal argument for the pairs of angles that are supplementary when parallel lines are cut by a transversal. |

## MATHEMATICS GRADE 8

| ALD | Standard | Novice | Partially Proficient | Proficient | Advanced |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Range | 8.G.6 | Knows the Pythagorean Theorem and that it applies to right triangles. | Understands a proof of the Pythagorean Theorem and its converse. | Understands and explains a proof of the Pythagorean Theorem and its converse. | Models a proof of the Pythagorean Theorem and its converse using multiple representations. |
| Range | 8.G. 7 | Calculates unknown hypotenuse side length given the Pythagorean Theorem. | Calculates unknown side lengths using the Pythagorean Theorem given two different side lengths of a right triangle. | Applies the Pythagorean Theorem to real-world situations in two and three dimensions to determine unknown side lengths. | Recognizes situations and applies the Pythagorean Theorem in multi- step problems. |
| Range | 8.G. 8 | Applies the Pythagorean Theorem to find the distance between two points in a coordinate system with the right triangle drawn where the Pythagorean Theorem is given. | Applies the Pythagorean Theorem to find the distance between two points in a coordinate system with the right triangle drawn where the Pythagorean Theorem is not given. | Applies the Pythagorean Theorem to find the distance between two points in a coordinate system. | Finds the coordinates of a point which is a given distance (non-vertical and non-horizontal) from another point. |
| Range |  |  |  |  |  |
| Statistics and Probability |  |  |  |  |  |
|  |  | The Level 1 Student: | The Level 2 Student: | The Level 3 Student: | The Level 4 Student: |
| Range | 8.SP. 1 | Constructs a scatter plot. | Constructs a scatter plot and describes the pattern as positive, negative, or no relationship. | Constructs and interprets scatter plots for bivariate measurements data to investigate patterns of association between two quantities. Describes patterns in a scatter plot such as clustering, outliers, positive or negative association, linear association, and nonlinear association. | Provides real-world examples of the different patterns of associations in a scatterplot. |
| Range | 8.SP. 2 | Recognizes a line can be used to describe a linear association on a scatter plot. | Draws a line on a scatter plot that closely fits the data points. | Judges how well the trend line fits the data by looking at the closeness of the data points to the line. | Compares more than one trend line for the same scatter plot and justifies the best one. |
| Range | 8.SP. 3 | Identifies the slope and y-intercept of a linear model on a scatter plot. | Identifies possible data points given a linear model. | Interprets the meaning of the slope as a rate of change and the meaning of the $y$-intercept in the context given a linear model. | Creates and uses a linear model based on a set of bivariate data to solve a problem in a context. |
| Range | 8.SP. 4 | Completes a partially filled-in two-way table and interprets the table by row or column. | Constructs a two-way table of categorical data. | Interprets and describes relative frequencies for possible associations from a two-way table. | Interprets and compares relative frequencies to identify patterns of association. |
