# Helping you save time and save **Lives.**

Imagine if your job could be made **easier.**

No time wasted tracking down lab results  
and paperwork.

Freeing you up to spend time treating your patients and helping them with what really matters most - their health.

The North Dakota Health Information Network connects providers like you to other providers through our secure, online network to share your patients' virtual health records.

## Charting the Course

You will no longer have to wait for the paper trail to come together. We will create a roadmap of data for a more thorough understanding of your patients' conditions, allowing for up-to-the-minute decisions and faster diagnoses.

With the NDHIN you will be able to:

- Reduce patient intake time
- Minimize duplication of tests and paperwork
- Access the most recent updates to medical records
- Cut costs, while increasing mobility

Any data exchanged is done so to benefit the patient and assist you in meeting your healthcare goals.

# Lives.

## Strength in Numbers

Our network ensures your patients' data is protected. You can trust that the exchanged information will not be compromised.

We ensure that patient information is:

- Safe and confidential
- Encrypted
- In accordance with HIPAA
- Tracked and audited

The future goals of the North Dakota Health Information Network are to connect to a national network to accommodate patients everywhere, regardless of their home state, as well as incorporate the PACS network. The PACS network will be used to efficiently communicate and archive pictures, such as X-rays or EKGs.

## Vital Connections

Once you are set up in the network, you will be able to share information to other participants through the NDHIN. You will have the ability to view, share and receive your patients' immunization records, medication lists, get lab orders or results and share referrals electronically

In the event of an emergency, personnel are able to access the network and quickly attain information to help the patient. These actions will be tracked and audited to ensure the data is used for healthcare purposes only.

It's about having the information at your fingertips during life's critical moments.
