Technology Strategy:

Develop and maintain technology infrastructure to collect, preserve and share historical and cultural objects and information.

Technology Infrastructure:

Windows desktop environment with network file and print shares manage by ITD.
Application and database hosting provided by ITD.

Planned Activities:

Currently implementing a agency collections management software called ReDiscovery Proficio, which is a commercial off the shelf industry specific application. Application and database hosted by ITD

Prepare for activity based on the outcome of the State Archives Study commissioned by the 63rd Legislative Assembly.

Technologies being considered or investigated:

Digital Asset repository infrastructure to manage digital records produced by state and local governments.

Acquire large volumes of network storage to accommodate digital assets produced by state and local government, and for historic and cultural preservation efforts of the agency.
