Final Report: December 30,2020** ✓

OBJECTIVE/STATEMENT OF WORK:
Shoreline restoration and excess sediment removal, installation of erosion barrier and riprap, construction of an earthen fishing pier.

STATUS:
The contract has been signed.

December 2017
Regretfully there has to date been no work begun at the designated site for the Phase II portion of Pheasant Lake Fishing access/shoreline restoration project. As we had received a call via the present contractor, Martin Construction, stating due to unforeseen health issues, the contractor would be unable to begin or complete the project. We (Dickey County Park Board) are currently looking for another contractor to start and complete the project. Thorpe Excavation (Ellendale) and Kelly’s Excavating (Oakes) have been contacted, however, neither contractor has given estimate or agreed to perform work presently. We appreciate immensely the Outdoor Heritage Fund’s patience and understanding in this unforeseen circumstance. We hope to have issues resolved and a contractor agreement in place by January of early February 2018. With permission of the OHF, we will continue to pursue a suitable contractor and inform the OHF of affirmed contractor immediately.

An amendment to the contract has been issued granting a one-year no-cost extension.

October 2018
Project work began 9/13/18 at Pheasant Lake Beach area. Approximately 400 feet of shoreline west of beach area had excessive sediment removed, utilizing long reach back hoe. Significant amounts of siltation, sediment, and cattails were removed from this area.

The sediment removed has been distributed to allow for maximum drying. Once moisture content has been reduced, this will be utilized for a 3:1 slope/base for erosion barrier coconut fiber barrier installation and earthen fishing pier.
Work is planned to continue until freeze up – possibly late November. An extension will be anticipated if wet conditions remain.

Photos included in full report.

**July 2019**
As of previous report Exhibit B, dated: (09/13/2018) excessive sediment/siltation/cattails were removed at that time: The excessive amount of sediment was distributed at that time to allow for maximum drying. Project work was anticipated to begin in early May 2019, however due to excessive snow fall throughout winter and excessive late spring rainfall, work has been delayed as sediment piles have not adequately dried for work on shoreline. After discussing with contractor, it is hoped work will begin in late July, early August. Contractor anticipates completion if adequate/desirable drying of sediment/exudate occurs, project completion projected in mid to late October. Currently there has been no further work to date done at project site since the last Exhibit B report was filed/submitted on 01/10/2018.

An amendment to the contract has been issued granting a one-year no-cost extension.

**June 2020**
A no-cost extension has been requested and granted through December 30, 2020 due to weather conditions.

**December 2020**
Project completed 10/30/2020. Earthen Fishing Pier completed with 6:1 Slope. Erosion barrier fabric placed, along with large and medium size rock to sloped area. Coconut erosion barrier placed along remaining shoreline with minimal slope for ease of access to water for angler usage. Remaining area leveled and bladed with grass seed mixture distributed for allowing natural foliage to emerge to allow for mowing maintenance and create walking foot path to access fishing pier and the remaining 250 feet of shoreline access. Overall a beautiful improvement to the lake, shoreline aesthetics. This will be a definite area of high use for fishing and general relaxation, for wildlife viewing, bird watching and general recreational use. The Dickey County Park Board is extremely thankful and grateful to the OHF Commission for their contributions and support of this worthy and beneficial project.

Photos included in full report.

This contract is now closed with a returned commitment of $11,652.56.
