Smoke alarms save lives. However, people with a hearing loss may not be able to depend on the traditional smoke alarm to alert them to fire.

FEEL THE VIBRATIONS...SEE THE LIGHTS: Smoke alarms with a vibrating pad or flashing light are available for people with a hearing loss. When people with a hearing loss are asleep, a high intensity strobe light may be required along with a pillow or bed shaker to wake them up and alert them to fire conditions so they can escape. Another Thought: Smoke alarms with a strobe light outside the home to catch the attention of neighbors, and emergency call systems for summoning help are also available.

WHERE TO FIND EQUIPMENT:
Smoke alarms with built in or separate strobe lights can be purchased through companies such as Harris Communications MaxiAids or Hear-More. You can type in a search for smoke alarms for deaf and hard of hearing and several choices will come up.

“Roughly two (2) out of three (3) fire deaths happen in homes with no smoke alarms or the alarms are not working”
SMOKE ALARMS ARE A KEY PART of a home fire escape plan. When there is a fire, smoke spreads fast. Working smoke alarms give you early warning so you can get outside quickly.

SAFETY TIPS: Install and maintain smoke alarms

- Install smoke alarms inside and outside each bedroom and sleeping area. Install alarms on every level of the home. Install alarms in the basement.
- Large homes may need extra smoke alarms.
- It is best to use interconnected smoke alarms. When one smoke alarm sounds they all sound.
- **Test all smoke alarms at least once a month.** Press the test button to be sure the alarm is working.
- Change batteries in smoke alarm at least once a year.
- Replace all smoke alarms when they are ten (10) years old.
- A smoke alarm should be on the ceiling or high on a wall. Keep smoke alarms away from the kitchen to reduce false alarms. They should be at least 10 feet from the stove.
- **Don't isolate yourself**
  - Speak to your family members, building manager or neighbors about your fire safety plan and practice it with them.
  - Contact your local fire department's nonemergency line and explain your needs. They can suggest escape plan ideas and may perform a home fire safety inspection if you ask.
  - Ask emergency providers to keep your needs information on file.
  - Keep a phone near your bed and be ready to call 911 or your local emergency number if a fire occurs.
