Enterprise Learning Management 9.0 (ELM)
What is it?

Project Description:

This project is an upgrade to PeopleSoft Training Administration which is currently in use. **ELM will provide an online, self service, and administrative employee training platform.** It has the potential for employees to enroll in classes three ways; through employee self service (including workflow for supervisor approval), a manager will be able to enroll employees, or an agency ELM Learning Administrator will be able to enroll staff. Go live is Friday January 22, 2010. Current Training opportunities offered through the Risk Management Online Training Management System will be made available for access through ELM.

Where can you enroll in training? The same place you go to check your leave balance and paystub!

Check out how it will look! To see how ELM works, go to the PeopleSoft Portal now and play the simulations!
